

LEPTOVOID H IS AVAILABLE FOR VACCINATION BEFORE TURN OUT

We have a good supply of Leptvoid H at present so don't delay to revaccinate before high risk turnout. If you missed last year's dose due to manufacturing issues then all stock will need to restart the programme. Heifers, previously unvaccinated stock, and stock which missed out last year require 2 injections 4-6 weeks apart.

We will be contacting those farms who missed out last year to organise a discount for restarting vaccination.

SCABIVAX IS AVAILABLE

We have good supplies of Scabivax available for this lambing season. It is available on next day delivery (for orders Mon-Thurs, Friday orders come on Monday).

ITS HUSKVAC TIME AGAIN!

Spring must be on its way as Huskvac is now available. Don't forget to order yours in plenty of time for that early turnout (ever the optimist!).

First dose should be given at least 6 weeks before turnout and second dose 2 weeks before (interval of approximately 4 weeks).

Huskvac can be used on animals over 8 weeks old (only healthy animals should be vaccinated). **Remember as it is a live vaccine it must be stored in the fridge for it to be effective. Also don't use in animals treated with a long-acting wormer and avoid concurrent worming doses as they will kill the live vaccine.**

Cow Signals

By kind invitation from the Wannop family

Heaton Hall Farm, Heaton-with-Oxcliffe LA3 3EU

10.30am -2.30pm

Lunch provided

All dairy farmers welcome

Places are limited so call ASAP to reserve your place

Guest speaker Owen Atkinson will show us how to interpret common cow behaviour and physical traits to identify problem areas, and guide us through some practical solutions to solve these.

This workshop will grow your understanding of what your cows are telling you and allow you to assess their environment with a fresh perspective. See inside for more details.

'A local practice committed to delivering outstanding service'

Green Lane Vet Centre, Garstang PR3 1PR Tel: 01995 602468

WHAT IS COW SIGNALS?

As a dairy farmer you visually check your cows several times each day... but what do you see and what are you missing?

Cows indicate their health and comfort through behaviour, posture and by displaying physical traits. When recognised and understood, these signals will help you to optimise the health and productivity of your cows and therefore the profitability of your business.

We are really pleased that Lanes Vets has secured Owen Atkinson to present a Cow Signals workshop at Heaton Hall Farm by kind invitation from Dave, Joe & James Wannop. The event has attracted sponsorship from AHDB and will be held on Thursday 26th March from 10.30 to 2.30 (see front page for details).

The workshop will involve:

- Talk on cow signals
- Assessing the cow environment
- Feed management
- Transition management
- Using cow signals to make an action plan

After the talk you should be empowered to reassess your cows' environment from a new perspective and be encouraged to find practical solutions to common problems.

Owen is a great presenter—both practical and entertaining and, as always, a good lunch and refreshments will be on offer.

This event is open to all local dairy farmers. Places are limited on this very popular course so if you want to attend please book asap. Places will be allocated on a first come, first served basis.

Call now on 01995 602468 to secure your place.

COW SIGNALS®

INTRODUCING UBROSTAR RED

Ubro Red is going to be replaced in March by Ubrostar Red. This is a very similar product and the intention is to help ease supply issues. Ubro Red is only sold in a few countries while Ubrostar Red is available globally and so continuity of supply should be assured.

How does Ubrostar Red differ from Ubro Red?

Both products contain the same amounts of Penethamate and Framycetin.

Ubrostar Red contains Benethamine Penicillin while Ubro Red contains Procaine Penicillin. However both these forms of penicillin are long acting salts of Penicillin G and the equivalent quantities of Penicillin G in both products are similar (in fact Ubrostar Red has slightly more at 171.6mg compared to 170.4mg in Ubro Red).

	<u>UBROSTAR RED</u>	<u>UBRO RED</u>
	100MG PENETHAMATE	100MG PENETHAMATE
COMPOSITION	280MG BENETHAMINE PENICILLIN (EQUIVALENT TO 171.6MG OF PENICILLIN G)	300MG PROCAINE PENICILLIN (EQUIVALENT TO 170.4MG OF PENICILLIN G)
	100MG FRAMYCETIN	100MG FRAMYCETIN
